Amano expands its access system solution product line

Roseland, NJ – Amano is introducing the AXP-120, a cost-effective, intelligent access control system using minimal hardware and powerful user-friendly software to provide a flexible solution for small sites.

The software is systematic and promotes a quick and easy configuration process for basic access control functionality while at the same time offering the ability to set up advanced features where necessary. Expanding an AXP-120 system is as simple as adding a new site. Similarly, the simplicity of administering a single site extends to the multi-site scenario.

Some of the AXP-120 key features include:

- Up to 1000 sites per host from a single location, unlimited hosts
- Up to 2000 tags per site
- 6000 buffered transactions per site
- Up to 4 anti-passback doors per site
- RS485 or dial-up communication
- Ethernet connectivity
- Intrusion alarm interaction
- Upgradeable to AXP 200 or AXP 400
- Scheduler utility to communicate with sites on a scheduled basis, for uploading and downloading data
